Caché and Ensemble 2016.3 field test now available

I am pleased to announce the field test of Caché and Ensemble 2016.3 - with many new improvements.

The product team at InterSystems looks forward to your participation in the field test and feedback over the coming months.

Some of the more significant changes in 2016.3 are new RESTful APIs for iKnow and broader APIs for programmatic control of multiple servers (enterprise manager). As always, there are a host of scalability and performance improvements, including improvements to the core database and SQL. And hundreds of smaller improvements and corrections. Summary details of these changes can be found [HERE](#).

In the next couple of days, Product Managers will post several updates with greater detail on how you can use the improvements of 2016.3 to improve your Caché and Ensemble based solutions.

You can download the latest field test of 2016.3 [HERE](#).

We all welcome your comments, questions and feedback.
