How to Sync User Accounts, Resources, Roles, WebApps, Tasks across to Mirror Members

Hi,

We have Mirroring established between NODE 1 & Node 2. We have set the "cachesys" database enabled for Journalling. But we dont see the User Accounts , Roles, Resources created on Node 1 (favoured Primary) reflected on Node 2. Is creating them manually again is the only option for this ? . Is there any way to sync them or would adding %SYS to MIRROR a possible solution. Would it be great if anyone has faced this as we have an issue that during failovers Team is locked out.

Best Regards,

Arun Madhan
