Debug SOAP Web Service Client

Hello

We have the following Operation's method:

```
Method obtenerConstantesBynumExpediente(pRequest As Mensajes.Request.DragoAP.ResumenPaciente.obtenerConstantesBynumExpedienteRequest, Output pResponse As Mensajes.Response.DragoAP.ResumenPaciente.obtenerConstantesBynumExpedienteResponse) As %Library.Status
{
    Set ..Adapter.WebServiceClientClass = "WSCLIENTE.DragoAP.ResumenPaciente.WsResumenPaciente"
    Set tSC = ..Adapter.InvokeMethod("obtenerConstantesBynumExpediente",.obtenerConstantesBynumxpndntRslt,pRequest.numExpediente) Quit:$$$ISERR(tSC) tSC

    Set tSC = pRequest.NewResponse(.pResponse) Quit:$$$ISERR(tSC) tSC
    Set pResponse.obtenerConstantesBynumxpndntRslt = $get(obtenerConstantesBynumxpndntRslt)

    set ^pResponse = pResponse
    set ^contenido = pResponse.obtenerConstantesBynumxpndntRslt
    Quit $$$OK
}
```

Besides we have the following method in the WebService Client:

```
Method obtenerConstantesBynumExpediente(numExpediente As %String) As EsquemasDatos.DragoAP.ResumenPaciente.tns.Constantes [ Final, ProcedureBlock = 1, SoapBindingStyle = document, SoapBodyUse = literal, WebMethod ]
{
    Quit ..WebMethod("obtenerConstantesBynumExpediente").Invoke($this,"http://tcsa.es/obtenerConstantesBynumExpediente",.numExpediente)
}
```

In the Message Viewer we observe:

ERROR #6237: Etiqueta inesperada en la entrada XML: linea (finaliza en la línea 1, carácter 536).

We have tried to view the LOGSOAP using the following Terminal commands:

```
ESBHCDNS>zw ^ISCSOAP
^ISCSOAP("LogFile")="/opt/contenedor/HCDNS PRE NUEVO traza Constantes.xml"

ESBHCDNS>set ^ISCSOAP("Log")="ios"

ESBHCDNS>zw ^ISCSOAP
^ISCSOAP("Log")="ios"
^ISCSOAP("LogFile")="/opt/contenedor/HCDNS PRE NUEVO traza Constantes.xml"
```

However after sending with the SoapUI we observe that the ^ISCSOAP("Log")="ios" dissappears:

```
ESBHCDNS>zw ^ISCSOAP
^ISCSOAP("LogFile")="/opt/contenedor/HCDNS PRE NUEVO traza Constantes.xml"

ESBHCDNS>set ^ISCSOAP("Log")="ios"

ESBHCDNS>zw ^ISCSOAP
^ISCSOAP("Log")="ios"
^ISCSOAP("LogFile")="/opt/contenedor/HCDNS PRE NUEVO traza Constantes.xml"

ESBHCDNS>zw ^ISCSOAP
^ISCSOAP("LogFile")="/opt/contenedor/HCDNS PRE NUEVO traza Constantes.xml"

ESBHCDNS>█
```

And the LOGSOAP file is not being generated

How could we continue trying to debug this Web Service Client?

How could we allow the LOGSOAP to be created?
