Plan de ejecución de consultas SQL

¿Es posible ver el plan de ejecución de una sentencia SQL en IRIS?

Como esto:

```

explain plan for
select  e.ename,r.rname
from    employees  e
join    roles      r on (r.id = e.role_id)
join    departments d on (d.id = e.dept_id)
where   e.staffno <= 10
and     d.dname in ('Department Name 1','Department Name 2');

```

Que devuelve esto:

```

-----
| Id | Operation          | Name          | Rows | Bytes | Cost (%CPU)| Time     |
-----
|  0 | SELECT STATEMENT   |               |      |      |  6 (100)|         |
|*  1 |  HASH JOIN         |               |      |      |  6  (0)| 00:00:01 |
|*  2 |    HASH JOIN       |               |      |      |  4  (0)| 00:00:01 |
|*  3 |      TABLE ACCESS FULL| DEPARTMENTS  |      |      |  2  (0)| 00:00:01 |
|*  4 |        TABLE ACCESS FULL| EMPLOYEES    |      |      |  2  (0)| 00:00:01 |
|  5 |          TABLE ACCESS FULL| ROLES        |      |      |  2  (0)| 00:00:01 |
-----

```

...and there's a lot more listed below here...
