Como quitar de un JSON una lista vacia?

Tengo esta clase definida:

```
Class Services.IS.Data.Pe Extends (%RegisteredObject, %JSON.Adaptor)
{
```

```
Property codigo As %String;
```

```
Property descripcion As %String;
```

```
Property ListaP As list Of P;
```

```
ClassMethod LoadPeCap(Param1 As %String, Param2 As %String) As %JSON.Adaptor
{
```

```
    Set rs = ##class(%SQL.Statement).%ExecDirect("SELECT PRF_c as PRF_c, PRF_des as PRF_des FROM
Esquema.tabla where PRF_c = \"Param1\" or PRF_c = \"Param2")
```

```
    Set pts = {"pts": []}
```

```
    While rs.%Next() {
```

```
        Set pec = {
```

```
            "PRF_c": (rs.%Get("PRF_c")),
```

```
            "PRF_des": (rs.%Get("PRF_des"))
```

```
        }
```

```
        set pec.codigo = rs.Get("PRF_c")
```

```
        set pec.descripcion = rs.%Get("PRF_des")*/
```

```
        Do pts.pts.%Push(pec)
```

```
    }
```

```
    Quit pts
```

```
}
```

Y en el JSON me aparece esto:

```
{
  "pts": [
    {"codigo": "1", "descripcion": "Publicada", "ListaP": []}
  ]
}
```

Hay alguna manera de que la Property creada como List no aparezca si no tiene datos??

Gracias
